Achievement

Objective:

Passionate 3rd-year Computer Science Engineering student with hands-on experience in AI agents, automation, and web technologies. Seeking internships and project-based roles to apply problem-solving and AI-driven solutions in real-world applications.

- **Web Technologies:** HTML, CSS
- **Designing:** UI/UX Design
- **Programming Languages:** Python, Java(Basic)
- **Frameworks & Tools:** Git, VS Code, Figma, Make.com
- **AI&Automation:** Prompt Engineering

1. AI Code Behavior Predictor

Developed an AI-powered system that analyzes source code and predicts its functionality or behavior using machine learning and natural language processing. Integrated LangChain for contextual code understanding and automated code explanation.

2. Telegram Bot using AI Agent

Built a Telegram-based chatbot integrated with an AI Agent to automate responses, provide intelligent assistance, and perform user-defined tasks. Focused on natural language interaction and context-aware conversation flow.

3. Direct Market Access (DMA) System

Created a prototype AI system that enables direct interaction between users and markets by automating market data retrieval and decision support. Designed for seamless and real-time insights to enhance trading or business intelligence.

Smart India Hackathon (SIH) – Participated in the national-level hackathon, developing AI-driven innovative solutions for real-world challenges

Techgium Project Competition – Presented a prototype solution addressing industry-specific problems using emerging technologies.

Technical Paper Presentation – Presented a research paper on innovative tech concepts, demonstrating strong analytical and presentation skills.
